KOPRON[®] ENERGY

PHOTOVOLTAIC

PHOTOVOLTAIC PARKS

A photovoltaic park, consisting of photovoltaic panels covering a large surface area, is generally installed to sell the energy produced and can be a reason to re-value an area: this is why it is important to design it and integrate it with the traditional agricultural activities.

- 1 - CANOPIES
- 2 - GREENHOUSES
- 3 - GROUND STRUCTURES

INDUSTRIAL APPLICATIONS

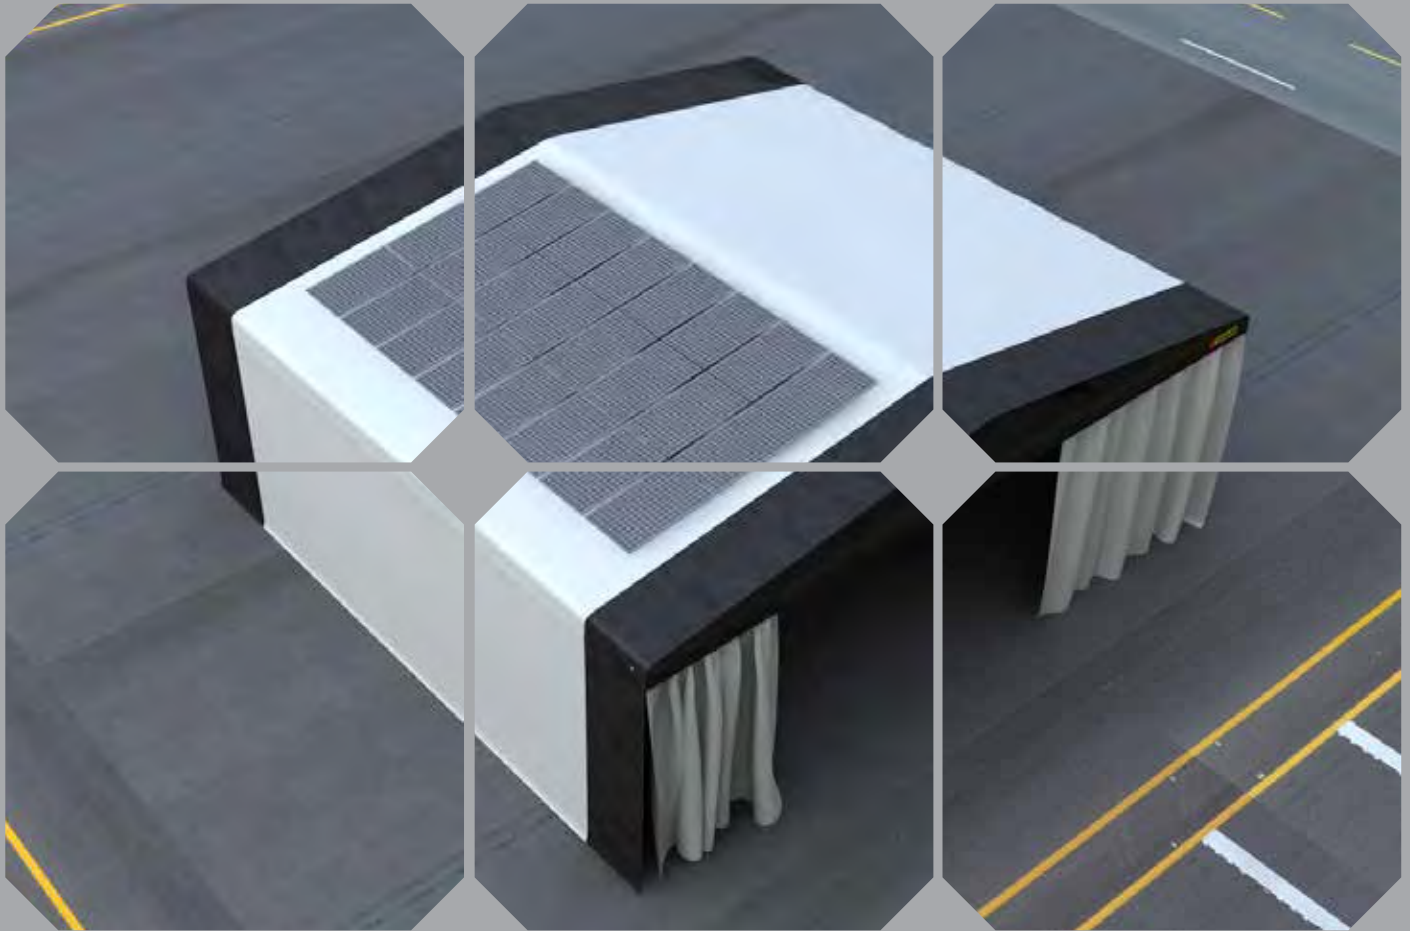

Thanks to photovoltaics, companies can finally take advantage of unused areas to produce energy directly from the sun: Photovoltaics therefore represent an ideal solution for the corporate financial statement, thanks to considerable savings in the line items relative to energy consumption.

PREFABRICATED ROOFS

Kopron Energy disposes of the old fibre cement (Eternit) roofing by first obtaining the necessary authorisation and then by following the appropriate technical procedure. A new roof of photovoltaic panels is then installed.

METAL STRUCTURES

For customers already using Kopron® structures, Kopron Energy assists in selecting the best panel covering to replace the existing roof. Alternatively, Kopron Energy can design custom structures which already include photovoltaic panels.

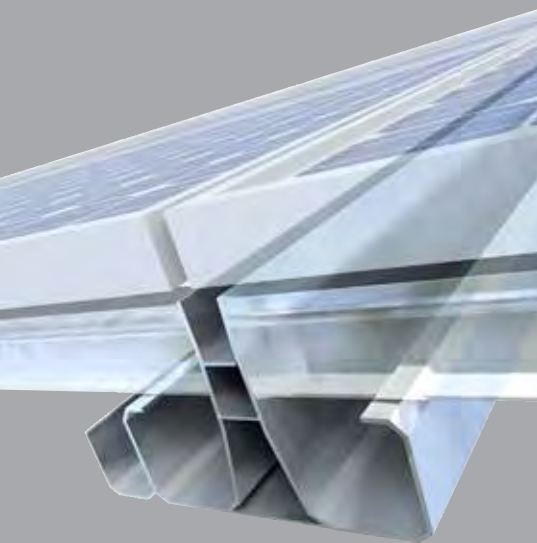

CIVIL APPLICATIONS

The technology that takes advantage of photovoltaic panel installations represents a great resource also for civil buildings, which, by using renewable energy, provides the tenants with considerable savings in electrical energy costs and promotes ethically conscious behaviour.

EXCLUSIVE KOPRON PATENT

Thanks to the Kopron® patent, water seepage is no longer a problem: the special series of aluminium extruded profiles, designed to be adapted to any panel, efficiently carry water away, allowing a cover to be mounted which serves as a roof and guarantees a watertight structure, for a better aesthetic and functional result.

The importance of renewable energy becomes more acute every day as a valid alternative to CO2 emissions, which are hazardous to both people and the environment. Kopron Energy, a division of Kopron SpA dedicated to the renewable energy sector, is committed to providing its own contribution in the adaptation towards a new social and economic conscience. Because of this, Kopron Energy employs professionals to develop projects applicable to industry, agriculture and home automation by offering a wi-

de range of solutions capable of satisfying any need. The company is currently active in the photovoltaic sector, growing strongly thanks to the incentives provided by the Energy Account legislation, which rewards those who produce energy through photovoltaic installations. Kopron Energy follows customers in a feasibility study and in the installation of the structures, with complete project management and foundation works, calculation reports and reinforced concrete.
